This is inspired by dekuNukem PicoRC.
I addressed the following design points:

5V and 12V trace widths sized to carry 8A
in 1oz Cu with +15C temperature rise

testpoint and status LED for each power rail

low-current (0.2A) power switch for reliability

right-angle gusset for front-plate mounting

heat-spreader for 79M05 voltage regulator

this derivative distributed under CC BY-SA 4.0
which is compliant with inbound MIT license
